

COMPANY PROFILE

Titan Marine Gas Terminal

Connected infrastructure.
A clear operating perspective.

www.tmgterminal.com

A FOCUSED ROLE

Connecting requirements with infrastructure.

Titan Marine Gas Terminal connects customer requirements with storage and marine terminal infrastructure through established operating relationships. Our focus is the coordination that allows energy products to move through ports, storage facilities and onward distribution networks.

OUR APPROACH

Clarity before commitment

Titan Marine Gas Terminal places clear communication at the centre of the customer relationship. Product characteristics, quantity, location, timing and handling requirements provide the basis for discussing an appropriate operational pathway.

EIGHT LOCATIONS

Positioned around global energy flows.

Titan Marine Gas Terminal's published network spans established maritime energy gateways in the Americas, Europe, the Middle East and Asia. Infrastructure suitability, access and service arrangements are discussed for each customer requirement.

HOU	Houston	United States
RTM	Rotterdam	Netherlands
JUR	Jurong	Singapore
FUJ	Fujairah	United Arab Emirates
TAO	Qingdao	China
NGB	Ningbo-Zhoushan	China
JHR	Johor	Malaysia
DUM	Dumai	Indonesia

Access and services are assessed for each requirement. Network locations do not imply ownership, guaranteed access or immediate availability.

A considered pathway for each operation.

Titan Marine Gas Terminal coordinates the interfaces connecting marine arrivals, terminal receipt, storage, product handling and onward movement. Each requirement is considered in the context of the applicable facility and operating arrangements.

01 **Establish the cargo requirements**

Titan Marine Gas Terminal begins with the product, quantity and unit, required port, intended dates and storage duration. Receipt and dispatch methods, quality requirements and supporting documentation help define the scope.

02 **Coordinate the relevant interfaces**

Titan Marine Gas Terminal works with the relevant terminal and service providers to discuss storage suitability, handling requirements, scheduling and operational responsibilities. Availability and acceptance are subject to confirmation.

03 **Maintain clear operational communication**

Titan Marine Gas Terminal supports coordination across receipt, transfer, storage and onward dispatch. Agreed documentation and communication channels help the parties follow the progress of the cargo.

CONNECTED CAPABILITIES

From vessel interface to the next movement.

Marine coordination

Titan Marine Gas Terminal supports the coordination of marine transportation with storage and terminal infrastructure. Our role connects the vessel interface with the shore-side requirements that support onward cargo movement.

Product handling

Titan Marine Gas Terminal coordinates product-handling requirements across terminal receipt, transfer, storage and dispatch. The appropriate pathway depends on the product, nominated facility and applicable operating procedures.

Product characteristics, facility suitability and the applicable operating arrangements inform the assessment.

MEASURED INFORMATION

Verification that supports informed decisions.

Titan Marine Gas Terminal coordinates analysis and inspection requirements with terminal operators, independent inspection companies and relevant operational partners. The scope is established according to the cargo, customer requirements and applicable procedures.

01 **An appropriate sampling and analysis scope**

Titan Marine Gas Terminal supports the coordination of relevant product information and inspection requirements. Sampling and analysis are undertaken by the appropriate qualified parties under the agreed arrangements.

02 **Clear information at transfer points**

Titan Marine Gas Terminal coordinates requirements for measurements, terminal records and supporting documentation with the relevant parties. The applicable method and responsibility depend on the operation.

03 **Traceability through the cargo pathway**

Titan Marine Gas Terminal supports clear communication of the documentation required at each stage. Inspection scope, reporting and release arrangements should be agreed before the relevant activity.

HSEQ FRAMEWORK

People. Infrastructure. Environment.

Titan Marine Gas Terminal considers health, safety, environmental awareness and quality throughout its coordination of terminal and marine activities. The procedures of the relevant facility and responsible operators govern operational execution.

01

Health

People and occupational awareness

02

Safety

Activity-specific risks and controls

03

Environment

Containment and handling
requirements

04

Quality

Information, procedures and
documentation

Applicable controls and procedures are established by the responsible facility and service providers.

A LONG-TERM PERSPECTIVE

Responsibility beyond the terminal.

01

Better coordination of connected activities

Titan Marine Gas Terminal supports planning across storage, transfer and marine interfaces. Clear requirements and timely communication help the parties identify practical opportunities to use infrastructure efficiently.

02

Considerations within the operating plan

Titan Marine Gas Terminal considers environmental requirements alongside product handling and terminal arrangements. The responsible operators establish the applicable facility controls and procedures.

03

Responsibility across the network

Titan Marine Gas Terminal values professional conduct and clear responsibilities in its relationships with customers and operating partners. Dependable communication supports informed operational decisions.

Professional relationships. Clearly defined requirements.

Titan Marine Gas Terminal brings together commercial communication and operational coordination across the terminal network. The roles of the customer, terminal operator and supporting service providers are established within the applicable arrangements.

01 **Define the customer requirement**

Titan Marine Gas Terminal begins with the product, quantity and unit, required port, intended dates and storage duration. Receipt and dispatch methods, quality requirements and supporting documentation help define the scope.

02 **Align the relevant parties**

Titan Marine Gas Terminal works with the relevant terminal and service providers to discuss storage suitability, handling requirements, scheduling and operational responsibilities. Availability and acceptance are subject to confirmation.

03 **Establish the next step**

Tell Titan Marine Gas Terminal what you need to move, where you need infrastructure and when the operation is intended. Clear information helps establish the relevant services, responsibilities and next steps.

YOUR NEXT OPERATION

A direct conversation. A clear next step.

Speak with Titan Marine Gas Terminal about your product, location and intended cargo schedule.
